ADVANCED PDF/HTML TEMPLATES

May 2021

PRESENTER

Gillian L. Pearson
NetSuite Manager, Consultant
gpearson@eidebailly.com
208.383.4769

INTRODUCTION TO ADVANCED PDF/HTML TEMPLATES

Out of the box NetSuite uses the Basic PDF layouts. Today we will discuss how to make the move to using Advanced PDF Templates. We will customize the templates using the WYSIWYG Editor and the source code mode. We will also see some more advanced functionality of Advanced PDFs. The goal today is to get you to a point where you aren't afraid to give it a try.

- SAID = SuiteAnswers article ID
- Go to SuiteAnswers and search for the ID number.
- I recommend you follow along in your NetSuite account if you can.

Advanced PDF
Templates
WYSIWYG Editor
Source Code
Advanced Uses

ADVANCED PDF TEMPLATES

BASIC PDF TEMPLATES

- Designed to be easier to modify and do not require any HTML knowledge.
- More restrictive in the types of customizations that they support.
- User interface is visual, with a drag-and-drop style.
- Select from a pre-defined list of fonts and apply styling like bolded, italicized, or underlined text.
- Adjust the application of borders to the fields and define the color(s) of the body text, labels, borders, and fills.
- Element Size and Element Position sections to apply precise sizing to each element and position it on the page.

**BASIC PDF
LAYOUT**

SLS00000251

ADVANCED PDF/HTML TEMPLATES – SAID 48703

Advanced PDFs:

- More customization capabilities than transaction form layouts, also known as basic layouts.
- Associate with custom transaction forms, to format printed and email versions of transactions.
- Support all transaction and print types supported by basic layouts.
- Standard templates are provided for each supported print type and includes the company logo.
- Template Editor supports current industry standards for HTML-based editing, including rich text editing and HTML markup source editing.
- *Preview* as you make changes; *detailed* error messages are shown if it cannot be saved.
- Use SuiteScript to take advantage of customization capabilities.
- Can be included in bundles.

Important:

New enhancements are added exclusively to advanced printing. Transaction Form PDF/HTML Layouts will be deprecated in a *future release*. You are encouraged to use advanced templates and associate them with custom forms.

BASIC VS. ADVANCED PDFS

Basic PDFs allow for fast distribution of changes because a single template can be used across many transaction types.

Advanced PDFs require a separate template for each transaction type. Due to this, it is best practice to start with a single template and work through the branding and formatting before moving on to additional templates.

WHICH SHOULD I USE?

Basic PDF Template:

- You are not *comfortable* working with code.
- You want to make simple changes (bold or add a field).
- You want multiple transactions to use the exact same template.

Advanced PDF Template:

- You are *comfortable* working with code.
- You need to use conditional logic.
- You need to add additional information to the template.
- You have very specific formatting requirements.
- You are unable to access the fields you need in the Basic PDF Template.

SETUP STEPS

- **Enable Features** – Navigate to Setup > Company > Enable Features. On the SuiteCloud tab enable “ADVANCED PDF/HTML TEMPLATES”.

☒ ADVANCED PDF/HTML TEMPLATES

ENABLE POWERFUL, TEMPLATE-BASED RENDERING OF SELECTED TRANSACTIONS. BY ENABLING THIS FEATURE, YOU AGREE TO [SUITECLOUD TERMS OF SERVICE](#).

This does not have to be provisioned, it is standard NetSuite and usually enabled during configuration.

- **Versions of third-party products used with Advanced PDF Templates.**

Product	Version
FreeMarker	2.3.26
Big Faceless Report Generator (BFO)	1.1.70
CKEditor	4.12.1

SETUP STEPS

Custom Form:

When creating a new custom transaction form or editing an existing one, you can define whether you prefer to use a Basic or Advanced PDF template.

The option that you select dictates which PDF templates are available for selection in the “PDF Layout” section. Selecting “Basic” limits the PDF Layout options to only PDFs listed under Customization > Forms > Transaction Form PDF Layouts, while selecting “Advanced” shows only those PDFs listed under Customization > Forms > Advanced PDF/HTML Templates.

Transaction Forms:

- Used for all transaction record types.
- Sales Orders, Item Fulfillments, Invoices, Bills, Journal Entries etc . . .
(directly plagiarized from Cory Anderson’s Customizing NetSuite presentation)

SETUP STEPS

- **Navigate to Customization > Forms > Transaction Forms**
 - If you already have a custom form you are using, you can edit that form, or you can customize a standard form.
 - The printing type is the area we will focus on.

SETTING THE STAGE

Prior to updating any template, I like to see my starting point/baseline and understand what I am going to be modifying. Hopefully, you have a mockup of the desired result, or notes on the changes to be made, as well as a test transaction to use.

- **Print the transaction with the standard template.**
 - Open the test transaction and ensure that it is using the appropriate custom form.

Note: After the test transaction is opened, keep it open, this will make viewing changes easier.

DEMONSTRATION TIME

CREATING A TEMPLATE

No matter how you plan to update the template, you first have to create it. You will be selecting an existing template to customize to your needs.

Navigate to Customization > Forms > Advanced PDF/HTML Templates

Find the transaction type of the template and click Customize if using a standard template and Edit if using an existing template.

Advanced PDF/HTML Templates						
<div>Submit New Template</div> <div>FILTERS</div>						
<div><div></div><div></div><div></div><div>SHOW INACTIVES</div></div>

Customize	Standard Statement PDF/HTML Template		STDTMPLSTATEMENT	Statement		<input type="checkbox"/>
Customize	Standard Multi-currency Statement Template		STDTMPLMULTICURRSTMT	Statement		<input type="checkbox"/>

CREATING A TEMPLATE

Click Template Setup. Enter a name for the template.

The screenshot displays the 'Advanced PDF/HTML Template' editor interface. At the top, the title bar reads 'Advanced PDF/HTML Template' and 'Custom Sales Order PDF/HTML Template'. Below the title bar, there are three buttons: 'Save', 'Template Setup' (highlighted with a red box), and 'Cancel'. The main workspace shows a template layout with fields for 'Company Name', 'Address', 'Bill To', 'Ship To', and 'Total'. On the right side, the 'Template Setup' dialog box is open, showing the 'Primary Information' section with fields for 'TITLE' (containing 'ABC Sales Order PDF/HTML Template') and 'DESCRIPTION'. Below this, there are checkboxes for 'TEMPLATE IS PREFERRED' and 'INACTIVE'. The 'Layout Setup' section includes dropdowns for 'PAGE ORIENTATION' (set to 'Portrait') and 'PAGE SIZE' (set to 'Letter'), and input fields for 'MARGIN' (TOP, RIGHT, BOTTOM, LEFT, all set to 0.5) and 'UNITS' (set to 'in'). The dialog box has 'Save' and 'Cancel' buttons at the bottom.

Use a naming convention to keep consistency.

You can also enter a description or update the margins if needed.

Click Save, then Save again.

CREATING A TEMPLATE

This is a good time to go back to your Custom Form and update your Print Template to your new Custom Template.

- **Navigate to Customization > Forms > Transaction Forms**

WYSIWYG EDITOR (WIZZY-WIG)

WYSIWYG EDITOR

There are two main ways to edit Advanced PDFs in NetSuite.

WYSIWYG Editor:

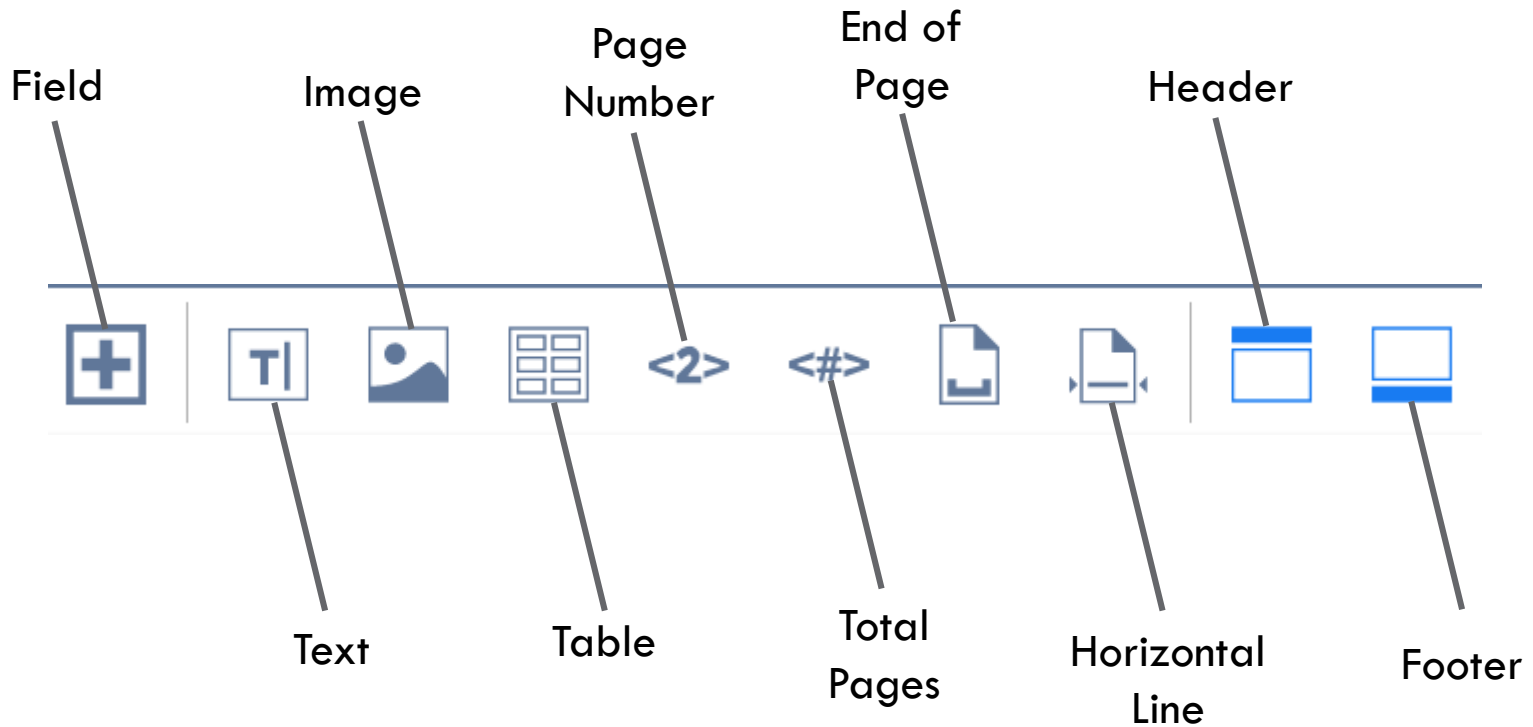

- Literally stands for “What You See Is What You Get.”
- Visual way to make changes in your template.
- Not as flexible or intuitive as the Basic PDF Template.

The screenshot displays the NetSuite WYSIWYG Editor interface. At the top, there is a navigation bar with tabs for 'New Element', 'Styles', 'Source Code', and 'Preview'. Below this is a toolbar containing various icons for adding elements (plus sign), text (T), images, tables, code snippets, and other formatting tools. The main workspace shows a bill template with the following structure:

Company Name Address		Title #Order # Date	
Bill To	Ship To	Total	
Bill To	Ship To	Total	
Payment Method	PO #	Shipping Method	Required Date
Payment Method	PO #	Shipping Method	Required Date
Qty	Item	Price	Amount
Qty	Item Description	Price	Amount
		Subtotal	Subtotal
		Tax (\$record.taxrate)%	Tax
		Total	Total

WYSIWYG EDITOR

Toolbar

DEMONSTRATION TIME

SOURCE CODE

SOURCE CODE

The second way to edit Advanced PDFs in NetSuite.

Source Code:

- FreeMarker Code
- More flexibility around formatting.
- Conditional logic.
- If you are *comfortable* with HTML or cutting and pasting from Google.

```
1 <?xml version="1.0"?><!DOCTYPE pdf PUBLIC "-//big.faceless.org//report" "report-1.1.dtd">

CUSTOMIZED PDF TEMPLATE

SLS00000251

1 of 1

DEMONSTRATION TIME

TIPS AND TRICKS

Advanced PDFs now have the ability to use “Save & Edit”, so that you no longer get sent back to the list of templates and have to reopen it.

By keeping your printed transaction tab open, you can refresh the tab each time you save an update to the template without having to reprint each time.

When you have a template that is working and you need to make modifications, save a backup before making major changes.

TIPS AND TRICKS

The advanced templates have always “versioned”, but now you can use that version to “undo” changes you have made.

Find the version at the very bottom and determine which version you want to go back to. Go to the URL and add “&version=5” at the end of the existing URL.

```
178 <hr /></#if>
179 <table class="total"
180 <td background-c
181 <td align="right
182 <td align="right
183 </tr></table>
184 </body>
185 </pdf>
```
